

Industrial infrastructure  
in new dimension

• DESIGN • PRODUCTION • MODERNISATION  
OF LOADING/UNLOADING AND INDUSTRIAL SYSTEMS

Tubes International is a group focused on continuous improvement. We anticipate the expectations of Customers and we search for new ways to adjust our products and services to Your changing needs. A direct result of those actions is the formation and opening of a new subsidiary company designing and producing industrial infrastructure: **Tubes Engineering.**

**Tubes Engineering has its own team of expert engineers,** whose experience of working on industrial systems extends over many years and many sectors, e.g. fuel, chemicals, gas, electric power, metallurgical and mining industries. We have gathered that experience while cooperating with the Customers within the Tubes International organisation for many years.

## **WE DESIGN, PRODUCE AND SUPPLY:**

Loading/unloading equipment made from:

- flexible hose assemblies
- loading arms

Industrial infrastructure:

- loading/unloading stations
- hose assembly suspension systems
- access platforms
- folding stairs
- building structures

As well as:

- process line systems
- floating roof, drainage systems
- fittings, pumps, pipelines
- automation systems
- storage tanks
- SKIDS
- reloading couplings

The infrastructure designed and produced by our company is employed in numerous reloading systems handling chemicals, food, terminals for fuel and petrochemical products. We deliver machinery and equipment that work in oil refineries, power plants, steel mills, chemical plants, petrochemical plants, in sewage treatment plants and waste water treatment plants but also in the food industry.

In **Tubes Engineering** we extend the scope of our services **concerning loading/unloading infrastructure design to include mechanical, process line, construction, electric and automation sector.**

We develop  
**solutions individually**  
**engineered to suit Customer needs**

# SERVICE.

We have a fleet of professional service cars for on-site operations and highly qualified service technicians. We provide maintenance works on: loading/unloading equipment, loading arms, flexible industrial hose assemblies. We also provide welding works on pipelines and many other works as required by the Customer. We provide our services all across Poland.

Customer satisfaction  
**is our priority**

## LOADING/UNLOADING EQUIPMENT SERVICES:

- installation of loading/unloading equipment at Customer location
- inspection and maintenance
- pressure testing
- electrical measurements
- warranty and post-warranty service

## SERVICES FOR INDUSTRY:

- hose assembly pressure testing
- electrical measurements
- installation and repair of industrial hose assemblies
- Installation of compensators
- installation and repair of hose reels
- welding steel pipelines and stainless steel pipelines
- welding plastic pipelines

# TECHNICAL CONSULTANCY SERVICES.

We support our Customers by providing technical consultancy services concerning equipment subject to technical supervision (UDT, TDT, WDT), but also by organising training courses and conferences on technical safety and safe operation of technical equipment.

## WHAT WE OFFER:

- infrastructure project management
- EPC project management/execution
- assessment and classification of loading/unloading units in reference to technical inspection requirements
- technical consultancy on selecting equipment for loading/unloading stations
- technological process optimisation
- training on operation of technical machinery
- safety training on loading/unloading equipment

We are always at your **service** with our **expertise knowledge** and **technical consultancy.**
